

KISO 501 Butyl – Aluminium coated butyl

Repair tape

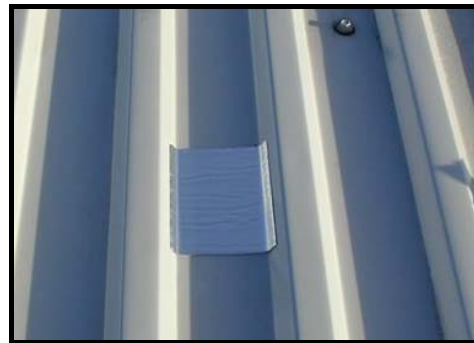

As a repair tape, KISO 501 Butyl is an especially usable tape for many different purposes. There are very few limits as to the use of this tape, and here are a few examples.

1.

A small leak in a gutter can be sealed without having to change the whole gutter. A small piece of KISO 501 butyl can easily be applied over the hole; all that is required is for the surface to be dry, clean, grease- and dust- free.

2.

Leaks in steel roofs or corrugated sheets are easy and quick to seal with KISO 501 Butyl. It is immensely faster and somewhat cheaper than changing the roofing plates.

3.

The tape can be used directly in the gutter, or horizontally, as shown in the picture.

4.

KISO 501 Butyl is easier to mount than lead or zinc plates around windows, chimneys and the like, as it is self adhesive.
